The difference of-position would correspond to a shifting of the line, p a, around S, the end, a, moving upwards, through an angle of  $2\ 11^\circ$ . The latter difference is one which could be wholly accounted for, not Only by assuming a very minute error in the determination of the radiant-point of the November shooting-stars, but by assuming very slight errors in the observations made upon comet I., 1866, during the time that it continued visible in our skies. No reasonable doubt can exist that the meteors and the comet form a single system. And, by the way, it is worth noticing, that as the comet passed its perihelion early in January, 1866, it had travelled the best part of the way towards the point, 1, in November, 1866; so that we passed through a...
